

Sensai Elasticsearch into Grafana

Monday, 22 March 2021 12:21 PM

Add port forward to localhost for 9200

Add rule from lan in on 9200

Point grafana at datasource with username elastic and password changeme

Import dashboards

Edit dash json model

Edit datasource to be Elasticsearch

Edit variables and remove /sensai/

The screenshot shows the 'Variables > Edit' page in Grafana. The variable is named 'elasticsearch' and is of type 'Datasource'. The label is 'optional display name' and the description is 'descriptive text'. Under 'Data source options', the type is 'Elasticsearch' and the instance name filter is '/Sensei/'. Under 'Selection Options', both 'Multi-value' and 'Include All option' are disabled. The 'Preview of values' section shows 'No data sources found'. A blue 'Update' button is at the bottom.

Variables > Edit

General
